

Unwanted moss may be eliminated by correcting some of these limiting factors for good turf growth...

Too little sunlight.

Remove trees, shrubs or branches if the shade affects turf growth or encourages moss.

Too wet.

Low spots or poor drainage can cause excessive moisture. Dig out any moss and build up the area with good topsoil. Add organic material and seed, as needed.

Too bare.

Moss grows where lawns are barren, weak or thin. Adjust nutrients after soil testing and plant the proper grass species for the site.

Attempts to rid lawns of unwanted moss rarely succeed unless a dense, actively growing turf takes its place.
